**PROBLEM TO BE SOLVED:** To provide an information system, which is user-friendly and automatically operated over a wide range, and to provide a method for operating such an information system. **SOLUTION:** The automatic information system is connected to a user terminal at its utilization. The automatic information system has a database (1) for storing subscriber data from a plurality of subscribers. At least one part of subscriber data in each of cases is composed of the network address of the communication unit of each of subscribers on a data network. Furthermore, the automatic information system has a search means (3) for searching a desired subscriber, on the basis of a search parameter acquired from the user and a user interaction system (2) for controlling the automatic information system by the user and/or outputting subscriber data on a subscriber found out inside a prompt and/or database to the user. The user interaction system (2) is composed of an automatic voice recognition and voice output device.
